SUMMARY

Front End Developer with 4+ years of experience building production-grade web applications across enterprise and SaaS environments. Specialized in React, Angular, Vue, and Next.js, with a strong foundation in TypeScript and RESTful API integration. Currently driving front-end development of a GRC SaaS/PaaS platform for GCC enterprises — delivering compliance dashboards, risk management workflows, Arabic localization, WebSocket-powered real-time features, and granular permission systems. Track record of shipping maintainable, scalable UI across Agile teams at both large corporations and fast-moving startups. Understands microservice architectures, cross-functional collaboration, and what it takes to translate complex business logic into interfaces users actually want to use.

TECHNICAL SKILLS

Frontend: React, Angular, Vue.js, Next.js, Nuxt, TypeScript, JavaScript, SASS, Tailwind CSS

Backend: Node.js, .NET (C#), Next.js API Routes, RESTful APIs, WebSocket / SignalR

Databases: MongoDB, Microsoft SQL, MySQL

WORK EXPERIENCE

Rezilens, LLC · Jan 2026 – Present

Front End Developer

- Owned front-end development of a full-scale GRC SaaS/PaaS platform serving enterprises across the GCC, covering risk management, compliance tracking, and maturity assessments in a single centralized application.
- Built comprehensive, data-rich dashboards and user-centric interfaces that translated complex GRC frameworks (ECC, CIS, CMMI) into intuitive, business-focused workflows — enabling company owners to manage risk, compliance, and assessments from one place.
- Led Arabic localization (RTL layout, i18n integration) to expand the platform's reach across the GCC market, ensuring a seamless bilingual experience.
- Integrated WebSocket-based real-time features for live data updates across dashboards, improving the responsiveness and accuracy of risk and compliance status views.
- Designed and implemented a granular permission management system, enabling role-based access control across modules to meet enterprise security and compliance requirements.
- Engaged directly with clients to gather requirements, understand business goals, and translate them into well-scoped user stories — contributing to product decisions that improved feature adoption and client retention.
- Maintained high code quality through structured code reviews, component-driven architecture, CI/CD practices, and close collaboration with backend and product teams in Agile sprints.

Accenture, Inc. · Nov 2024 – Dec 2025

Front End Developer

- Took ownership of a mission-critical internal QA ticketing system used daily across the entire Accenture organization — a tool that sits at the heart of how the company tracks, routes, and resolves quality issues at scale.
- Led a deep refactor of the system's frontend: dismantled years of legacy, bloated code and rebuilt it into a clean, modular component architecture — making the codebase faster to develop against, easier to maintain, and noticeably more responsive for end users.
- Designed and delivered a fully integrated ticket history system — a new feature that gave users a clear, chronological view of every action and state change on a ticket, embedded seamlessly into the existing application flow and tied into the broader system's data layer.
- The improvements directly sharpened the accuracy and reliability of Accenture's QA process — when the tool employees depend on every single day runs better, so does the quality assurance behind the company's client delivery.

UAE Remote Freelance · Jan 2025 – Oct 2025

Full Stack Developer

- Sole developer responsible for building and maintaining an internal CRM system that became the operational backbone of a UAE-based sales company — the single tool their team relied on to manage leads, track activity, and close deals every day.
- Built the full product from the ground up: React frontend with reusable components, Node.js REST APIs, and end-to-end data flows that matched the real rhythms of the sales team's daily work.
- Owned the entire delivery lifecycle — from requirements conversations with the client through to deployment and post-launch fixes — ensuring the system stayed aligned with how the business actually operated, not just what was on a spec sheet.

AccessSoft Solutions, Inc. · Feb 2023 – Nov 2024

Full Stack Developer

- Led development of an enterprise Hotel Management System for a prominent hotel in Mindanao — a platform that became central to how the property ran day-to-day operations, from front desk workflows to staff coordination and sales tracking.
- Built the system end-to-end using Next.js, Angular, and .NET (C#): responsive frontend interfaces that staff used constantly, backend APIs that kept everything connected, and a database architecture designed to hold up under real operational load.
- The impact was tangible — staff moved faster, manual friction dropped, and management gained visibility into operations they didn't have before. This wasn't a side tool; it was the system the business ran on.
- Worked directly with the client throughout the project — understanding their workflows, shaping the feature scope, and iterating on delivery until the product genuinely fit how their team operated.

SYKES Enterprises · Dec 2021 – Jul 2022

Software Developer Intern

- Built and enhanced React components, connected frontend to REST APIs, and translated design mockups into responsive layouts using CSS, Tailwind, and SASS — supporting senior developers across live features.

EDUCATION

Bachelor of Science in Computer Science · 2022 – 2024

University of Southern Philippines Foundation

Bachelor of Science in Computer Science · 2018 – 2021

University of San Carlos (Undergraduate)
